Dear AP Calculus Students:

There is summer homework in preparation for AP Calculus. The posted assignments include notes to help you get through the material. In addition, there are notes under the University of Washington handouts, which will also help you to complete these assignments. Powerpoints are also posted to aid in your learning/review. It is your responsibility to do the following before July 15th.

1. Sign up for remind texts/emails, this will be the primary way for us to communicate. If you have questions feel free to email me and I will get back to you asap.

my email: Kim.Schjelderup@mercerislandschools.org

If you do not get a reply acknowledging that I have received your email within 72 hours (three days), email me at the following address (a back up email address), again, only if I did not respond to your question within three days.

backup email: Kim_McFadden7@msn.com

2. Once you are enrolled in the course and have access to Schoology, review the site to familiarize yourself with what is available. We do not have a hard textbook, but a textbook is available online for your access.

3. Complete about one assignment per week since school has been out. If you have not already begun, you may be completing two assignments per week. These assignments will be collected and checked the first week of school. The summer homework is optional, but it is to your advantage to complete the assignments.

4. Do not procrastinate. Complete the assignments on a regular basis and you will not be overwhelmed when the summer comes to a close. There will be a quiz the first week of school over the first 7 assignments and a quiz the second week over all the assignments.

5. The calculator we will use for next year is the TI-NspireCX-CAS. I have a few I will loan out the first few weeks of school, and if you are unable to buy one yourself, I will loan you an old Nspire CAS for use during the school year, but not the color model.

6. I look forward to a great year in 2017.2018, but am looking forward to the months of July and August first! Have fun this summer, relax, read, rest, and have fun, but DON’T FORGET TO DO YOUR CALCULUS HOMEWORK.

Sincerely,
Ms Schjelderup, your AP Calculus teachers for 2017.2018
