LEARNING ASSESSMENT

PREVIEW EXERCISE

The questions in Table 1 below touch on topics discussed in *The Guide*. Before watching the film, review these questions and respond using prior knowledge.

POSTVIEW EXERCISE

Revise your responses in Table 1 based on what you saw in the film. After completing the table, answer questions 6–11 (and 12–14 if assigned by your instructor).

Table 1. Preview and postview exercise for *The Guide*.

</tbody>
</table>
4. Describe what you think a national park biologist's role is.

5. Describe an argument a person might make against the establishment of a national park.

Answer the following questions after watching the film.

6. Which of the following actions would decrease biodiversity in a protected land like Gorongosa National Park?
   A. Increasing sizes of human populations.
   B. Increasing sizes of populations of small animals like insects and amphibians.
   C. Decreasing pollution like acid precipitation.
   D. Decreasing the amount of poaching of large animals.

7. List three human activities that have negatively affected biodiversity in Gorongosa National Park.

8. In the film, Dr. E. O. Wilson and Tonga Torcida help the local children conduct a bioblitz in a small section of Gorongosa National Park. What is the purpose of a bioblitz?
9. From 1977 to 1992 there was a civil war in Mozambique. Figure 1 shows the number of large animals in Gorongosa before and after the civil war. Study the graph and answer questions a – c.

![Graph showing decline in wildlife populations](image)

**Figure 1.** Numbers of large animals living in Gorongosa National Park before (1972) and after (2000) the civil war.

**a.** Describe in general what happened to these animal populations from 1972 to 2000.

____________________________________________________________________________________
____________________________________________________________________________________

**b.** State the estimated number of wildebeest that lived in Gorongosa before the war. After the war?

____________________________________________________________________________________
____________________________________________________________________________________

**c.** Using evidence from the graph, which animal population was most affected by the war? What evidence can you cite from the film that might have led to the decline of this particular animal species relative to the other species?

____________________________________________________________________________________
____________________________________________________________________________________
In the film, Tonga explains that Mount Gorongosa is the source of the water that animals in the park drink. The trees on the mountain hold on to the water from the rain and release it slowly down the mountain over time—even during the dry season. Tonga says that when he was little, Mount Gorongosa was always covered with clouds, but there are no clouds anymore. The movement of water and the formation of clouds can be explained by the water cycle. A diagram of the water cycle is shown in Figure 2.

![Figure 2](image-url)

**Figure 2.** A simplified illustration of the water cycle in Gorongosa National Park.

10. Use the diagram to explain why destruction of the rain forest on Mount Gorongosa would result in a shortage of accumulated water in the park.

11. Since the end of the civil war in Mozambique in 1992, many animal population sizes have changed. Estimated population sizes for a few of the large animals in the park are included in Table 2 below.
Table 2. Some large animal species population estimates in Gorongosa National Park, Mozambique, in 1972 before the civil war began. Estimates were made again in 2000, eight years after the war ended, and also in 2014.

EXTENSION/Critical Thinking

12. List three human activities that have negatively affected biodiversity in your (city, region, country).
_________________________________________________________________________________________________
_________________________________________________________________________________________________
_________________________________________________________________________________________________

13. If you and your classmates conducted a bioblitz like the one in the film, but in the area around your school, list 10 species that you think you might find:
_________________________________________________________________________________________________
_________________________________________________________________________________________________
_________________________________________________________________________________________________
_________________________________________________________________________________________________
_________________________________________________________________________________________________

Alternatively, conduct a bioblitz in your schoolyard, like the one conducted in the film. Using reference books and resources provided by your teacher, work in groups to identify at least 10 species:
_________________________________________________________________________________________________
_________________________________________________________________________________________________
_________________________________________________________________________________________________
_________________________________________________________________________________________________
_________________________________________________________________________________________________

14. Certain animals such as zebra, lion, and wildebeest were reintroduced in the park after the war, but others were not. Based on what you’ve learned, why do some animal populations have to be reintroduced?
